a priori of physics	Content	
6.2.3.	The Trivector and the $\mathfrak{3}$ -space Chiral Pseudoscalar	238
6.2.3.2.	The Cartesian Orthonormal Basis 1-vector Set of <i>Primary Quality of Third Grade (pqg-3)</i>	238
6.2.3.3.	The Hodge Coordinate for the Pseudoscalar Span in $\mathfrak{3}$ Space	240
6.2.4.	The Geometric Algebraic Basis of a $\mathfrak{3}$ -space	240
6.2.4.1.	The 1-vector Basis	240
6.2.4.2.	The Transversal Bivector Basis as a Dual Basis of a $\mathfrak{3}$ -Space	240
6.2.5.	The Geometric Algebra for Euclidean $\mathfrak{3}$ -space	241
6.2.5.2.	The Commuting Pseudoscalar for $\mathfrak{3}$ -Space	241
6.2.5.3.	The Mixed Product Between a 1-vector and a Bivector	241
6.2.5.4.	The Simple Product of Three 1-vectors	242
6.2.5.5.	Even and Odd Multivector in general	242
6.2.5.6.	Product of Two Bivectors	242
6.2.5.7.	Commutator Product of Multivectors in Geometric Algebra	243
6.3.	The $\mathfrak{3}$-space Structure <i>Quality</i> Described by Multivectors	245
6.3.2.	The Even and the Odd Geometric Algebra	245
6.3.3.	Operational Structure of the Trivector Chiral Volume Pseudoscalar \mathbf{i} of $\mathfrak{3}$ Space	246
6.3.4.	Rotation in $\mathfrak{3}$ -space	247
6.3.5.	Multiplication Combination of Rotors	248
6.3.5.1.	The Unitary group $U(1)$ for Plane Combination of Rotors	248
6.3.5.2.	Multiplication Combination of <i>Direction</i> Different 1-rotors in $\mathfrak{3}$ -space	248
6.3.5.3.	Comment on the Ontology of <i>Directions</i> and Possibility of Location	249
6.3.5.4.	The Abstract Generalised Rotor Form	249
6.3.6.	Rotation of Multivectors	250
6.3.7.	Framing a Field for Geometric Algebra in $\mathfrak{3}$ -space	250
6.4.	The Geometric Clifford Algebra	251
6.4.1.1.	The Quadratic Form in general	251
6.4.1.2.	The Clifford Algebra for Complex Numbers	251
6.4.1.3.	The simple Euclidean Plane Geometric Clifford Algebra $\mathcal{G}_{2,0}$	251
6.4.1.4.	Plane Subjects in Euclidean $\mathfrak{3}$ Space Clifford Algebra $\mathcal{G}_{3,0}$	252
6.4.2.	The Pauli Basis for combined direction structures of $\mathfrak{3}$ -space	253
6.4.2.2.	The Pauli Matrices as generator operators	253
6.4.2.3.	The Pauli Basis Generated from 1-vectors	253
6.4.3.	The Quaternion Picture	254
6.4.3.1.	An Anti-Euclidean Geometric Algebra $\mathcal{G}_{0,2}$	254
6.4.3.2.	Quaternions \mathbb{H}	255
6.4.4.	The Versor as a <i>Direction</i> 2-Rotor	256
6.4.4.2.	The Traditional View on the Spatial Rotation Problem	256
6.4.4.3.	The Four Real Scalar Coordinates for the Versor Quaternion <i>Direction</i>	257
6.4.5.	The Two Parameter Quaternion 2-Spinor	260
6.4.5.2.	Two State Observable of a Fundamental <i>Entity</i> in $\mathfrak{3}$ Space	261
6.4.6.	Euler Angles for a Rotor in $\mathfrak{3}$ -space	263
6.4.6.2.	The Other Euler Angle Sequence	266
6.4.7.	The Transversal Bivector Idea Dual to a 1-vecetor Foundation for Rotations	267
6.4.7.1.	The two Orthogonal Rotors as Generators for a Local Entity	267
6.4.8.	The Rotated <i>Direction</i> in $\mathfrak{3}$ -space	268
6.4.8.2.	Rotation of a Chosen <i>Direction</i> in $\mathfrak{3}$ Space	268
6.4.9.	Oscillations in $\mathfrak{3}$ -space	270
6.4.9.1.	Review of the Quantum Mechanical Circle Oscillator	270
6.4.9.2.	Multi Excitations of Angular Momentum Internal in One <i>Entity</i>	271
6.4.9.3.	Intuition of Two Perpendicular Exited Circle Oscillators Inside one Entity	271
6.4.9.4.	Breaking the Spherical Symmetry into One <i>Direction</i>	273
6.4.9.5.	External and Internal <i>Directions</i> of an <i>Entity</i> in $\mathfrak{3}$ space	274

Research on the a priori of Physics
Geometric Critique of Pure Mathematical Reasoning
Jens Erfurt Andresen
 Edition 2, © 2020-22

a priori of physics	Content	
6.4.9.6.	Complementarity	274
6.5.	The Angular Momentum in $\mathfrak{3}$ Space	275
6.5.1.	One Quantum of Angular Momentum	275
6.5.1.1.	1-vector Angular Momentum	275
6.5.1.2.	The Bivector Angular Momentum	275
6.5.1.3.	The Angular Momentum Operator	276
6.5.1.4.	Excitation of Angular Momentum in three directions of $\mathfrak{3}$ Space	276
6.5.1.5.	Commutator Products of Angular Momentum Bivectors and their Dual 1-vectors	277
6.5.2.	The Commutator Relations in Geometric Algebra for Angular Momenta	278
6.5.2.2.	Orthogonal Chirality of Angular Momenta in the Even $\mathcal{G}_{0,2}$ Geometric Algebra	279
6.5.3.	Thoughts About Symmetry Braking and Quantisation of <i>Direction</i> in $\mathfrak{3}$ -space	280
6.5.4.	Chiral Orientation of Combined Angular Momentum Bivectors and Dual 1-vectors	282
6.5.4.2.	The Total Angular Momentum of a local <i>entity</i> in $\mathfrak{3}$ space	282
6.5.5.	The Quantum Stats of the Locally Combined Angular Momentum	284
6.5.5.2.	The Quantum Ladder Step Operations in $\mathfrak{3}$ space	285
6.5.5.3.	Excitation of Angular Momentum in $\mathfrak{3}$ space	286
6.5.6.	The Spin $\frac{1}{2}$ of a <i>Directional Entity</i> of Locality in $\mathfrak{3}$ -space	287
6.5.6.1.	The fundamental first excitation of $\mathfrak{3}$ space	287
6.5.6.2.	Symmetry Braking of the Half Spin $\Psi_{\frac{1}{2}}$ Entity,	287
6.5.7.	Synthesis of the Locality of <i>Entities</i> in $\mathfrak{3}$ -space	290
6.5.8.	The Idea of One Spin $\frac{1}{2}$ <i>Entity</i> in Physical $\mathfrak{3}$ -space	291
6.5.8.1.	The Extension Distribution of the Wavefunctions	291
6.5.8.2.	The Internal Oscillating Wavefunction Components	291
6.5.8.3.	The Oscillator Fluctuating Versor Wavefunction for the <i>Entity</i> $\Psi_{\frac{1}{2}}$ in $\mathfrak{3}$ space	292
6.5.8.4.	Versor Eigenwave-Function as for the Stationary State Existence of an <i>Entity</i> $\Psi_{\frac{1}{2}}$	294
6.5.8.5.	The One Eigen-Versor Separated in 1-Spinor Angular-Momentum-Wavefunctions	294
6.5.8.6.	The Versor Quaternion Spin $\frac{1}{2}$ <i>entity</i> $\Psi_{\frac{1}{2}}$	295
6.5.8.7.	Eight Qualitative States of a Spin $\frac{1}{2}$ <i>Entity</i> $\Psi_{\frac{1}{2}}$ in $\mathfrak{3}$ Space	297
6.5.9.	The Internal Auto Synchronisation of an Indivisible-Atomic-Elementary <i>Entity</i>	298
6.5.10.	A Hypothetic Thought Intuition of One Four-Angular-Momenta Function	300
6.5.10.2.	The Autonomous Regular Tetraon Basis for Four-Angular-Momenta Function	300
6.5.10.3.	An Autonomous Four-Angular-Momenta Function	301
6.5.10.4.	Information from one Tetraon Symmetric <i>entity</i> $\Psi_{\frac{1}{2}}$	301
6.5.10.5.	The Regular Tetraon Symmetry <i>Quantity</i> Cargo of One Indivisible Spin $\frac{1}{2}$ <i>entity quality</i>	303
6.5.10.6.	The Freedom of the Tetraon Angular Composition in one Fermion	304
6.5.10.7.	Multiple Circular Oscillators as Structure Form <i>Qualities</i> for Spin $\frac{1}{2}$ Fermions	304
6.5.11.	The Full Geometric Algebra $\mathcal{G}_3(\mathbb{R})$ for Spin $\frac{1}{2}$ Fermions	305
6.5.11.2.	The Non Quaternion <i>Grades</i> ≤ 3 for of Indivisible <i>Entities</i> $\Psi_{\frac{1}{2}}$ in $\mathfrak{3}$ Space	305
6.5.12.	The strange Intuition of Locality in $\mathfrak{3}$ -space	307
6.5.13.	The Fundamental Concept of <i>Direction</i> Locality in Space	308
6.6.	Identical <i>Entities</i> in $\mathfrak{3}$-Space	309
6.6.1.1.	Classification of Fermions in the Structure of $\mathfrak{3}$ -space	309
6.6.1.2.	The Simple Versor Form and the $SU(2)$ Algebra of the Complex 2×2 Matrix Group	309
6.6.1.3.	Three Linear Independent Internal Components of Angular Momenta of Fermion Structure	310
6.6.2.	Fermions have by Tetraon Symmetry from the Platonic Tetrahedron Idea	310
6.6.3.	The <i>Categorical Quality</i> of Spin $\frac{1}{2}$ Fermions in $\mathfrak{3}$ -space	311
6.6.3.2.	The Categorical Classification of Identical Spin $\frac{1}{2}$ Fermions in $\mathfrak{3}$ Space	312
6.6.4.	The Idea of One Interaction <i>Direction</i>	312
6.6.4.1.	The One Whole <i>Quantity</i> Charged Fermion	312
6.6.4.2.	The Field of Information About one Charge	313
6.7.	Multiple Numbers of Spin$\frac{1}{2}$ Fermions	314
