Research on the a priori of Physics Geometric Critique of Pure Mathematical Reasoning

A Research on the a priori of Physic –	List of figures
List of figures	
Figure 1.1 Oscillator wheel rolling along the parameter axis θ , also called the phase. Radius 12π	36
Figure 1.2 The parameter-axis $\omega t \in \mathbb{R}$ rolled over by the unit circle oscillator $e^{i\omega t}$. Radius 1, one unit.....	36
Figure 1.3 The development parameter-axis $t \in \mathbb{R}$ wound on a frequency scaled circle oscillator (classical clock).....	36
Figure 3.1 The ground state is <i>normal distributed</i>	64
Figure 3.2 The quantity of ω of the circle oscillator, where $v \perp r$, $\omega \perp r$ and $\omega \perp v$	66
Figure 3.3 The graph for ground state 0,0, with the ‘highest’ fundamental symmetry around an arbitrary centre.....	76
Figure 3.4 The plane-symmetrical ground state. The vertical axis is the probability density of locality.....	76
Figure 3.5 The graph magnitude for the first excited state in the circle oscillator $r\rho = 14\pi\rho e - 12\rho^2 \in \mathbb{R}$, for $\forall \rho \in \mathbb{R}$	78
Figure 3.6 The double excitation of a single ground state provides even density functions for $n=2$; $m = -2,0,2$	80
Figure 3.7 In thought tripled excitation of the ground state 0,0 to $3,m$ is an odd function in one and the same plane.....	81
Figure 3.8 The intuition that the ground state is excited to a harmonic circle oscillator with the angular momentum	82
Figure 3.9 An intuition of the density distribution of the angular momentum for a retrograde excited circle oscillation.....	84
Figure 3.10 The intuition of expectation for the radial distribution of the active angular moment over the transversal plane	85
Figure 3.11 The intuition of the first excited state of the circle oscillator is based on the radial distribution.....	86
Figure 3.12 Here the intuition of the transversal area intensity $I\theta, \rho$ of the progressive circle oscillating rotation	87
Figure 3.13 The intuition of causality as a primary quality : The in A created entity $AB\Psi \pm \omega$, is causally annihilated in B.....	91
Figure 3.14 The radiating entity Ψ_A in A is different from a receiving measurement Φ_B in B. The difference	120
Figure 4.1 Number line for the real scalars is produced as a vector by the linear form $x = \lambda 111$	129
Figure 4.2 Cartesian coordinate system produces the plane from two real scalars through a vector addition.....	129
Figure 4.3 The complex unit circle is an example of one basis vector $1 \odot \mathcal{O}$, which produces the complex plane.....	132
Figure 4.4 The object, a straight line	141
Figure 4.5 Addition of translations.....	147
Figure 4.6 Translation of 1-vectors \mathbf{x}	148
Figure 5.1 Concept of a plane. k- f	155
Figure 5.2 The circle of an angle	156
Figure 5.3 The angular arc in the unit circle	156
Figure 5.4 Angular direction expressed sequentially as O,A,B ~ A,B,O ~ B,O,A	156
Figure 5.5 The sector area in the unit circle as a half measure for the angular quantity	158
Figure 5.6 Circle with a tangent coordinate	159
Figure 5.7 Vector sum and difference	160
Figure 5.8 The scalar product	163
Figure 5.9 $\mathbf{a} \cdot \mathbf{b} = \mathbf{b} \cdot \mathbf{a}$ is commutative	164
Figure 5.10 The quality of the object Bivector $\mathbf{b} \wedge \mathbf{a}$ spans the area quantity magnitude $\mathbf{b} \wedge \mathbf{a}$	166
Figure 5.11 The B bivector does not have any specific geometrical shape but represents a plane segment with pqq-2 direction	167
Figure 5.12 Unit 2-blade	169
Figure 5.13. Four operations with \mathbf{i} in the co-plane trough	170
Figure 5.14 Example objects for the shapeless unit bivector $\mathbf{i}=\mathbf{i}=\mathbf{i}$ as a plane segment subject	170
Figure 5.15 The multiplicative inverse (reciprocal) 1-vector in (5.79) for the unit area \mathbf{i}	171
Figure 5.16 Identity rotor	171
Figure 5.17 Angle $\angle \mathbf{u}_1, \mathbf{u}_2$	171
Figure 5.18 Rotor $U\theta$	171
Figure 5.19 Revers rotor $U\theta \dagger$	171
Figure 5.20 \leftarrow Two cases of $\theta \rightarrow$ The bivector $\mathbf{B} = \mathbf{u}_2 \wedge \mathbf{u}_1$, where $\theta = \angle \mathbf{u}_2, \mathbf{u}_2 \in \mathbb{R}$, $\mathbf{u}_1 = \mathbf{u}_2 = 1 \in \mathbb{R}$,	172
Figure 5.21 The rotor $U \perp$, where the unit sector area has a radius of 4π	172
Figure 5.22 One 1-vector \mathbf{a}	173
Figure 5.23 One 1-rotor in the plane \mathfrak{P} . Three separate objects for that one 1-rotor subject are illustrated for intuition	173
Figure 5.24 2-vector $\mathbf{u}\sigma$: The exponential series for	173
Figure 5.25 Plane product of two 1-rotors \uparrow Addition of the arc quantities of the angles in the same plane	174
