A ...	List of figures	– Research on the a priori of Physic –
Figure 5.26	The rotor operator acts on a 1-vector from left or from right: $U\theta\mathbf{a} = \mathbf{b} \leftrightarrow \mathbf{a}U\theta = \mathbf{c} = U\theta \dagger \mathbf{a} = \mathbf{c}$	174
Figure 5.27	Rotation invariance.....	174
Figure 5.28	Two mutually reverse complex <i>quantities</i> . (\mathbf{a} and \mathbf{b} not shown).	175
Figure 5.29	The complex <i>quantity</i> as a 2-vector $\mathbf{Z} = \mathbf{ru}1$	176
Figure 5.30	Circular oscillation plane $\mathbf{i} = \sigma_2\sigma_1$	176
Figure 5.31	The three points of the circle.	177
Figure 5.32	The three bivectors.	177
Figure 5.33	The three-sector central symmetrical circle combined of three equal rotations by the rotor $U2\pi3$	177
Figure 5.34	The anti-co-linear collapse of the circle plane to a straight line segment. Remark here that $U - \pi = U\pi = -1$	178
Figure 5.35	Unit circle with four successive orthonormal 1-vectors.....	179
Figure 5.36	Four quadrants with the four intuit objects of identical indistinguishable unit bivectors \mathbf{i}	179
Figure 5.37	The complex plane spanned from the bivector $\mathbf{i} = \sigma_2\sigma_1$ by the polar real scalar coordinates ρ, θ by the 1-spinor	179
Figure 5.38	The angular area is quadratic in the magnitude $\theta^2\rho^2$, and linear in the angle.....	182
Figure 5.39	<i>Cartesian</i> x_1, x_2 coordinate system from a orthonormal-basis $0, \sigma_1, \sigma_2$	183
Figure 5.40	\mathbf{i} The unit area.	187
Figure 5.41	The plane $\mathbf{u}\wedge\mathbf{x}$	193
Figure 5.42	Reflection around a 1-vector \mathbf{u} . (through \mathbf{u} in the plane).	193
Figure 5.43	Reflection in a normal plane \perp to \mathbf{u} is equivalent to a reflection along \mathbf{u}	194
Figure 5.44	The projection of \mathbf{x} along \mathbf{a} is intuited as $P\mathbf{a}\mathbf{x} = \mathbf{x} \parallel \mathbf{a} = \frac{1}{2}\mathbf{x} + \mathbf{a} - 1\mathbf{x} = \frac{1}{2}\mathbf{x} + \mathbf{x}'$	194
Figure 5.45	Particle reflection inside the plane $\mathbf{u}\wedge\mathbf{p} = \mathbf{u}\mathbf{p}$ by the normal.....	195
Figure 5.46	\mathcal{R} , Rotation in a plane. constituted of two reflections.....	196
Figure 5.47	The <i>rotation</i> is a linear angular <i>pqg-2 transformation</i> $U = e + \mathbf{i}\theta$	196
Figure 5.48	The nilpotent element in a plane is a 1-vector <i>direction</i> additive combined with	200
Figure 5.49	The \mathcal{B} -bivector $\mathcal{B} := \gamma_1\gamma_0, k=1$ forming a \mathcal{B} -plane from the 1-vectors γ_0 for development.....	209
Figure 5.50	The <i>null basis</i> \mathbf{n}, \mathbf{n} with the pseudoscalar \mathcal{B} -bivector unit $\mathcal{B} = \mathbf{n} \wedge \mathbf{n} = \gamma_1\gamma_0$	210
Figure 5.51	The invariant hyperbola transformed $\gamma_0\lambda$ and $\gamma_1\lambda$ is displayed in the null basis \mathbf{n}, \mathbf{n} diagram.....	211
Figure 5.52	Projection of the \mathcal{B} -bivector into a 1-vector σ_1 as object on a surface for the intuition.....	211
Figure 5.53	The Minkowski $\mathcal{B}k$ -plane in one γk extension <i>direction</i> relative to information development unit count γ_0	213
Figure 5.54	The Minkowski space with two γ_1, γ_2 extension <i>directions</i> forming the extension plane $\gamma_1\gamma_2$ <i>direction</i> relative	213
Figure 5.55	The four-dimensional Minkowski space projected into the figure plane. The extension space is.....	216
Figure 5.56	The STA basis $\gamma_0, \gamma_1, \gamma_2, \gamma_3$ displayed as perpendicular <i>directions</i> in all four dimensions.	222
Figure 6.1	Concept of a Space: r-w.....	233
Figure 6.2	Axial cylinder symmetric rotation of a transversal plane field $\gamma\mathbf{n}2\wedge\mathbf{n}1$	234
Figure 6.3	The Cartesian space coordinate system.	234
Figure 6.4	Three perpendicular planes intersect at just one point O. These planes.....	235
Figure 6.5	Regular tetraon demand by 1-rotor split in scalar and bivector (6.12).....	236
Figure 6.6	Bivector addition from the foundation on the external product definition of 1-vectors, that comply with the distributive law.....	237
Figure 6.7	A trivector object $\mathbf{c}\wedge\mathbf{b}\wedge\mathbf{a}$ is formed and spanned by the three 1-vector objects $\mathbf{a}, \mathbf{b}, \mathbf{c}$	237
Figure 6.8	The unit trivector <i>direction</i> formed on the dextral orthonormal basis $\sigma_1, \sigma_2, \sigma_3$ as an object in $\mathfrak{3}$ space.	238
Figure 6.9	The unit chiral pseudoscalar subject as the <i>pqg-3 direction quality</i>	238
Figure 6.10	The linear <i>pqg-1</i> span $\mathbf{x} \in V3, \mathbb{R}$ with Cartesian coordinate from a <i>pqg-1</i> basis $\sigma_1, \sigma_2, \sigma_3$ in $\mathfrak{3}$ Space.....	240
Figure 6.11	The dual basis in $\mathfrak{3}$ Space:.....	240
Figure 6.12	Regular rotation around \mathbf{b} by an angle $\beta=2\theta=\mathbf{b}$, driven by the unitary spinor.....	246
Figure 6.13	Rotor multiplication in $\mathfrak{3}$ space gives.....	248
Figure 6.14	Non-commuting rotors $U2U1 \neq U1U2$	248
Figure 6.15	1-rotor $U3$ for spinor $Q3 = \rho U3$	258
Figure 6.16	The turned plane unit object $\mathbf{i} \perp \frac{1}{2}\psi$	258
Figure 6.17	Overview of a simple rotation by the three Euler angles in an orthogonal local frame: $0. \Psi \sim \sigma_1, \sigma_2, \sigma_3$	264
Figure 6.18	The two orthogonal circle.....	272
Figure 6.19	An arbitrary intuition of the two perpendicular circle oscillators.	272
Figure 6.20	The unit sphere for the $S2$ <i>hide</i> what is going on inside. The even algebra $\mathcal{G}0,2$ has a structure for the versor	273

A Research on the a priori of Physic –	List of figures	
Figure 6.21	Three <i>internal directions</i>	274
Figure 6.22	The spin $\frac{1}{2}$ cone with the height projection $\mathbf{j}3\Psi\frac{1}{2} = \pm 12\hbar\sigma_3$, $\hbar = 1$,.....	288
Figure 6.23	An autonomous <i>entity</i> $\Psi\frac{1}{2}$ has in all 8 <i>directional</i> cases founded in in the dextral basis	297
Figure 6.24: a.	Introducing the regular tetraon basis $\mathbf{u}0, \mathbf{u}1, \mathbf{u}2, \mathbf{u}3$ intuition objects relative to the Cartesian $\sigma_1, \sigma_2, \sigma_3$	300
Figure 6.25	<i>null lines</i> of an information field from a charged electron. As a 2D projection from a 4-dimensional idea.....	314
Figure 6.26	$ri \rightarrow Rn, \ell riri2$	318
Figure 6.27	Angular distribution $Y\ell m \ell \theta, \varphi$ from	318
Figure 6.28	Madelung rule.	318
Figure 7.1	STA perpendicular basis with the <i>direction</i> $\gamma_3 = \sigma_3\gamma_0$ is the propagation into the <i>FUTURE</i>	334
Figure 7.2	STA basis with the <i>direction</i> orientation of γ_3 is into the past emerge from a transmitting origin.....	334
